

Project Development Phase

Model Performance Test

Date	JUNE 2026
Team ID	
Project Name	Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	 The screenshot displays a Tableau data table titled 'UNESCO World Heritage Sites'. The table has four columns: 'Category', 'Action/Region En', 'Country', and 'Region En'. The data is organized into rows, with the first row being a header row. The subsequent rows list various UNESCO World Heritage Sites, including 'Cultural', 'Natural', and 'Mixed' categories, with corresponding 'Action/Region En', 'Country', and 'Region En' values. The table is rendered in a standard Tableau format with a light blue header and alternating row colors.

		Successfully imported UNESCO dataset with fields including Name_en, Country, Region, Danger, Date_inscribed, and more. Data is correctly displayed in Tableau and linked to visualizations
2.	Data Preprocessing	Removed missing/null values, ensured data types (dates, strings, boolean) were correctly set, and added calculated fields such as year extraction from Date_inscribed. Filtered out redundant columns. Number of rows after cleaning data:1121
3.	Utilization of Filters	Implemented filters on Country, Region, Danger Status , and Year . Filters are interactive and applied to all visualizations for dynamic exploration.

		 The screenshot displays a Power BI dashboard with three main visualizations. The top visualization, 'TOP 20 REGIONS BY AREA', is a world map highlighting the top 20 regions by area in green. The middle visualization, 'Regions by Heritage ended', is a world map showing regions colored by the year their heritage ended, with a legend on the left. The bottom visualization, 'Year Forecasting of Heritages', is a line chart showing the 'Danger' level over time, with a legend on the left. Each visualization has a corresponding filter pane on the left side of the dashboard.
4.	Calculation fields Used	Year Extracted from Date_inscribed • Count of Sites by Country • Danger Flag Conversion for Pie Chart (IF [Danger] = 'Yes' THEN 'In Danger' ELSE 'Not in Danger') • Region-wise Risk Rate: $\text{SUM}(\text{IF} [\text{Danger}] = \text{'Yes'} \text{ THEN } 1 \text{ ELSE } 0) / \text{COUNT}([\text{Name_en}])$ • Decade of Inscription: $\text{INT}(\text{YEAR}([\text{Date_inscribed}]) / 10) * 10$ • Country-wise Site Percentage: $(\text{COUNTD}([\text{Name_en}]) / \text{TOTAL}(\text{COUNTD}([\text{Name_en}]))) * 100$

5.	Dashboard design	No of Visualizations / Graphs – 8 No of Dashboards designs- 2
----	------------------	--

6	Story Design	No of Visualizations / Graphs -8 No of Story Design- 1
